

# Silver Series Manual Hoists

*Lifting efficiency to new heights*

Silver Series chain hoists and lever hoists promote safety and smoother operation in the field by delivering premium features at a competitive price. Manual chain hoists handle up to 5 metric ton capacities; lever hoists up to 6 metric tons. Both are certified to meet or exceed ASME 830.16 specifications and HST-2M standards.

## Common features for Silver Series manual hoists:

**Open frame design** simplifies inspection and cleaning.

**Encased and retained roller bearings** increase operating efficiency and ease of maintenance.

**Efficient gear reduction** minimizes operator effort and fatigue, for superior positioning and productivity.

**Multi-layer coatings** – nickel, zinc, and chrome – provide corrosion resistant performance to protect long-term value.

**Hardened swivel latch hooks** are available in several styles.

**Double chain guides** promote smooth, jam-free operation, even when pulling excess chain quickly.

### **SMB Manual Chain Hoists** (0.50 to 5 metric ton lifting capacity)

**Compact all-steel construction** provides strength and durability in low profile formats that minimize weight and headroom requirements.

**Single chain fall** (up to 3-ton capacity) also keeps weight low for easier handling and operation.

**Durable construction and overload protection** reduce downtime and repair costs, an ideal fit for the hard-working demands of construction and rental markets.

### **SLB Lever Hoists** (0.75 to 6 metric ton lifting capacity)

**Stamped steel construction** reduces weight and improves impact resistance.

**Short handle stroke** and deep lug knobs allow one-handed operation and easier rigging in tight spaces. Built-in braking minimizes the risk of accidents.
